

RF spectrum and site audit

Content

- 01 Our fleet
- 02 Drone system characterization – Anechoic Chamber
- 03 Multi-spectral direction finding
- 04 Broadcast site audit
- 05 Mobile site audit
- 06 Broadcast and mobile tower modelling
- 07 3D tower model and RF information integration
- 08 Channel specific inspections
- 09 Satellite dish analysis and micro-wave measurements

01

Our fleet

DJI Phantom

- Photogrammetry
- Surveying
- Footage
 - Video
 - Images

03

Our fleet continued

DJI Matrice 210 series

- Photogrammetry
- Surveying
- Footage
 - Video
 - Images
- Mobile site audits

Our fleet continued

DJI Matrice 300 RTK series

- 3D modelling
- Tower Inspections
- Broadcast site audits
- Mobile site audits
- D-RTK compatible
- Satellite + Microwave measurements

Our fleet continued

DJI Matrice 600 Pro

- Broadcast site audits
- Mobile site audits
- D-RTK compatible
- Satellite + Microwave measurements

D-RTK GNSS

- Centimeter-Level Positioning Accuracy
- IP65 level ingress protection
- Built-in IMUs for optimization

Drone characterization: Anechoic chamber

- Full anechoic chamber for drone characterization
 - Receive pattern (Roll, Pitch and Azimuth offsets)
 - Receiver gain
 - Front-to-back ratio

- Special jacket has been designed to cover the RPA to ensure that it is shielded against Radio Frequency interference!

03

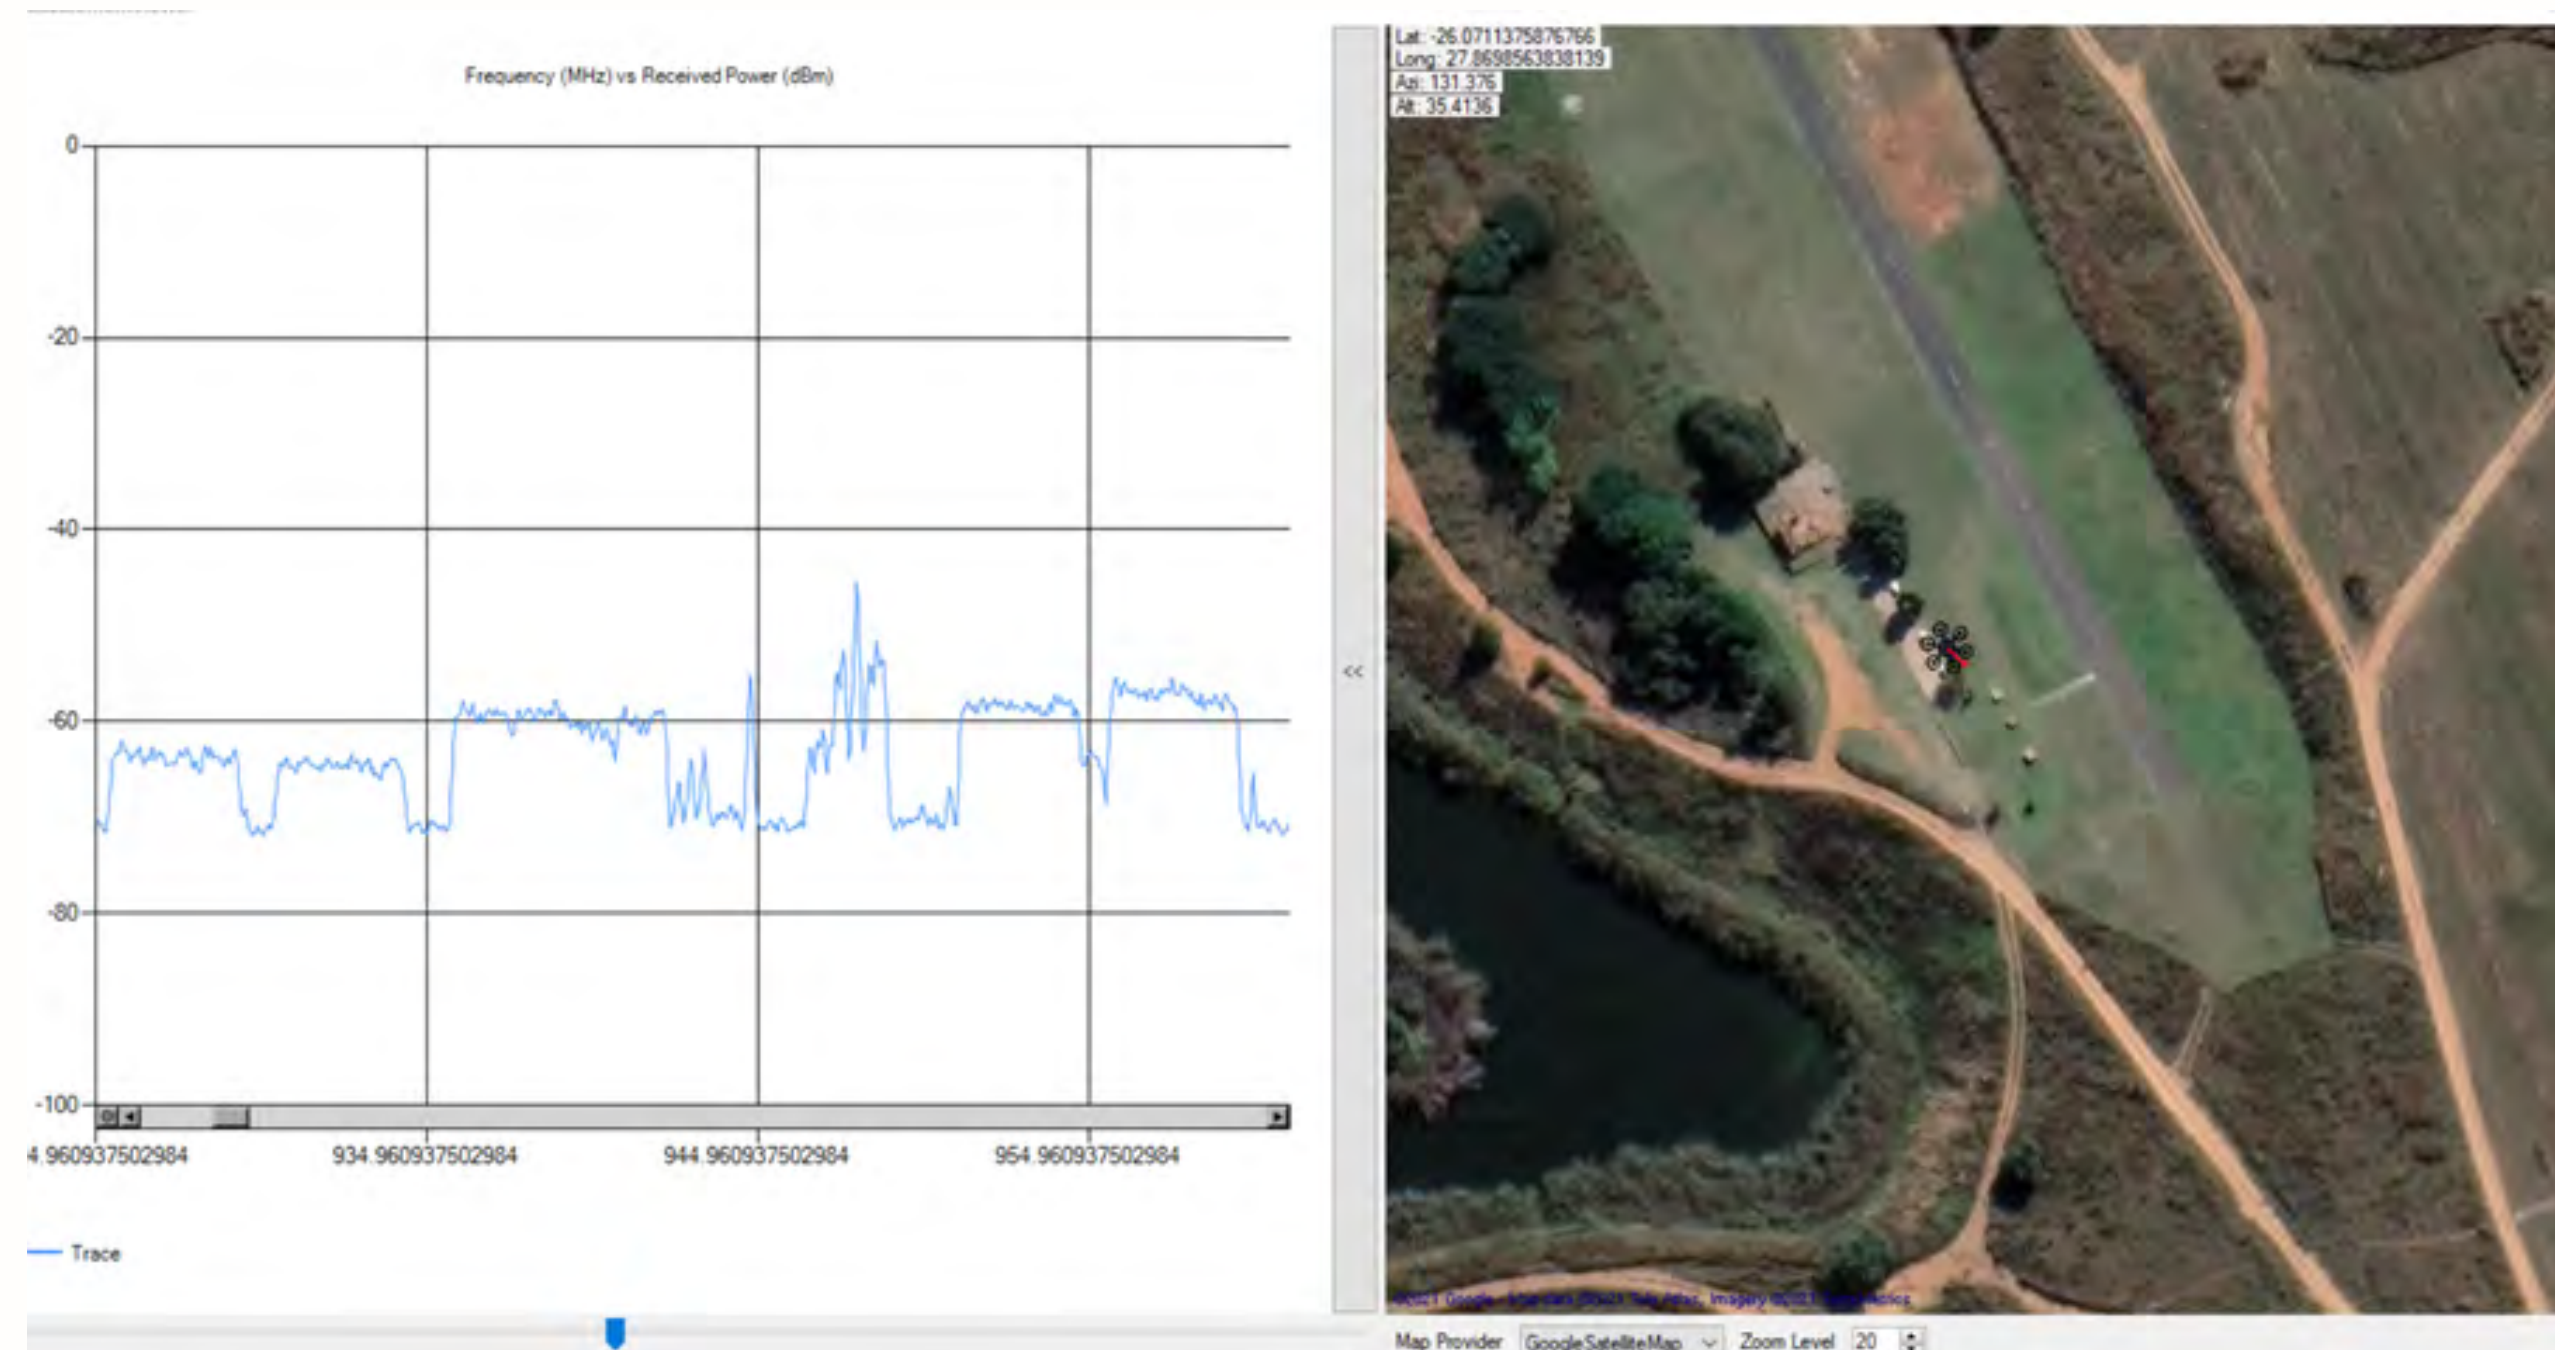

Multi-Spectral direction finding

- Point rotation out of clutter measurements
- Multi spectrum analysis
- Not limited to environment
- Database compiling
- Fast results and feedback

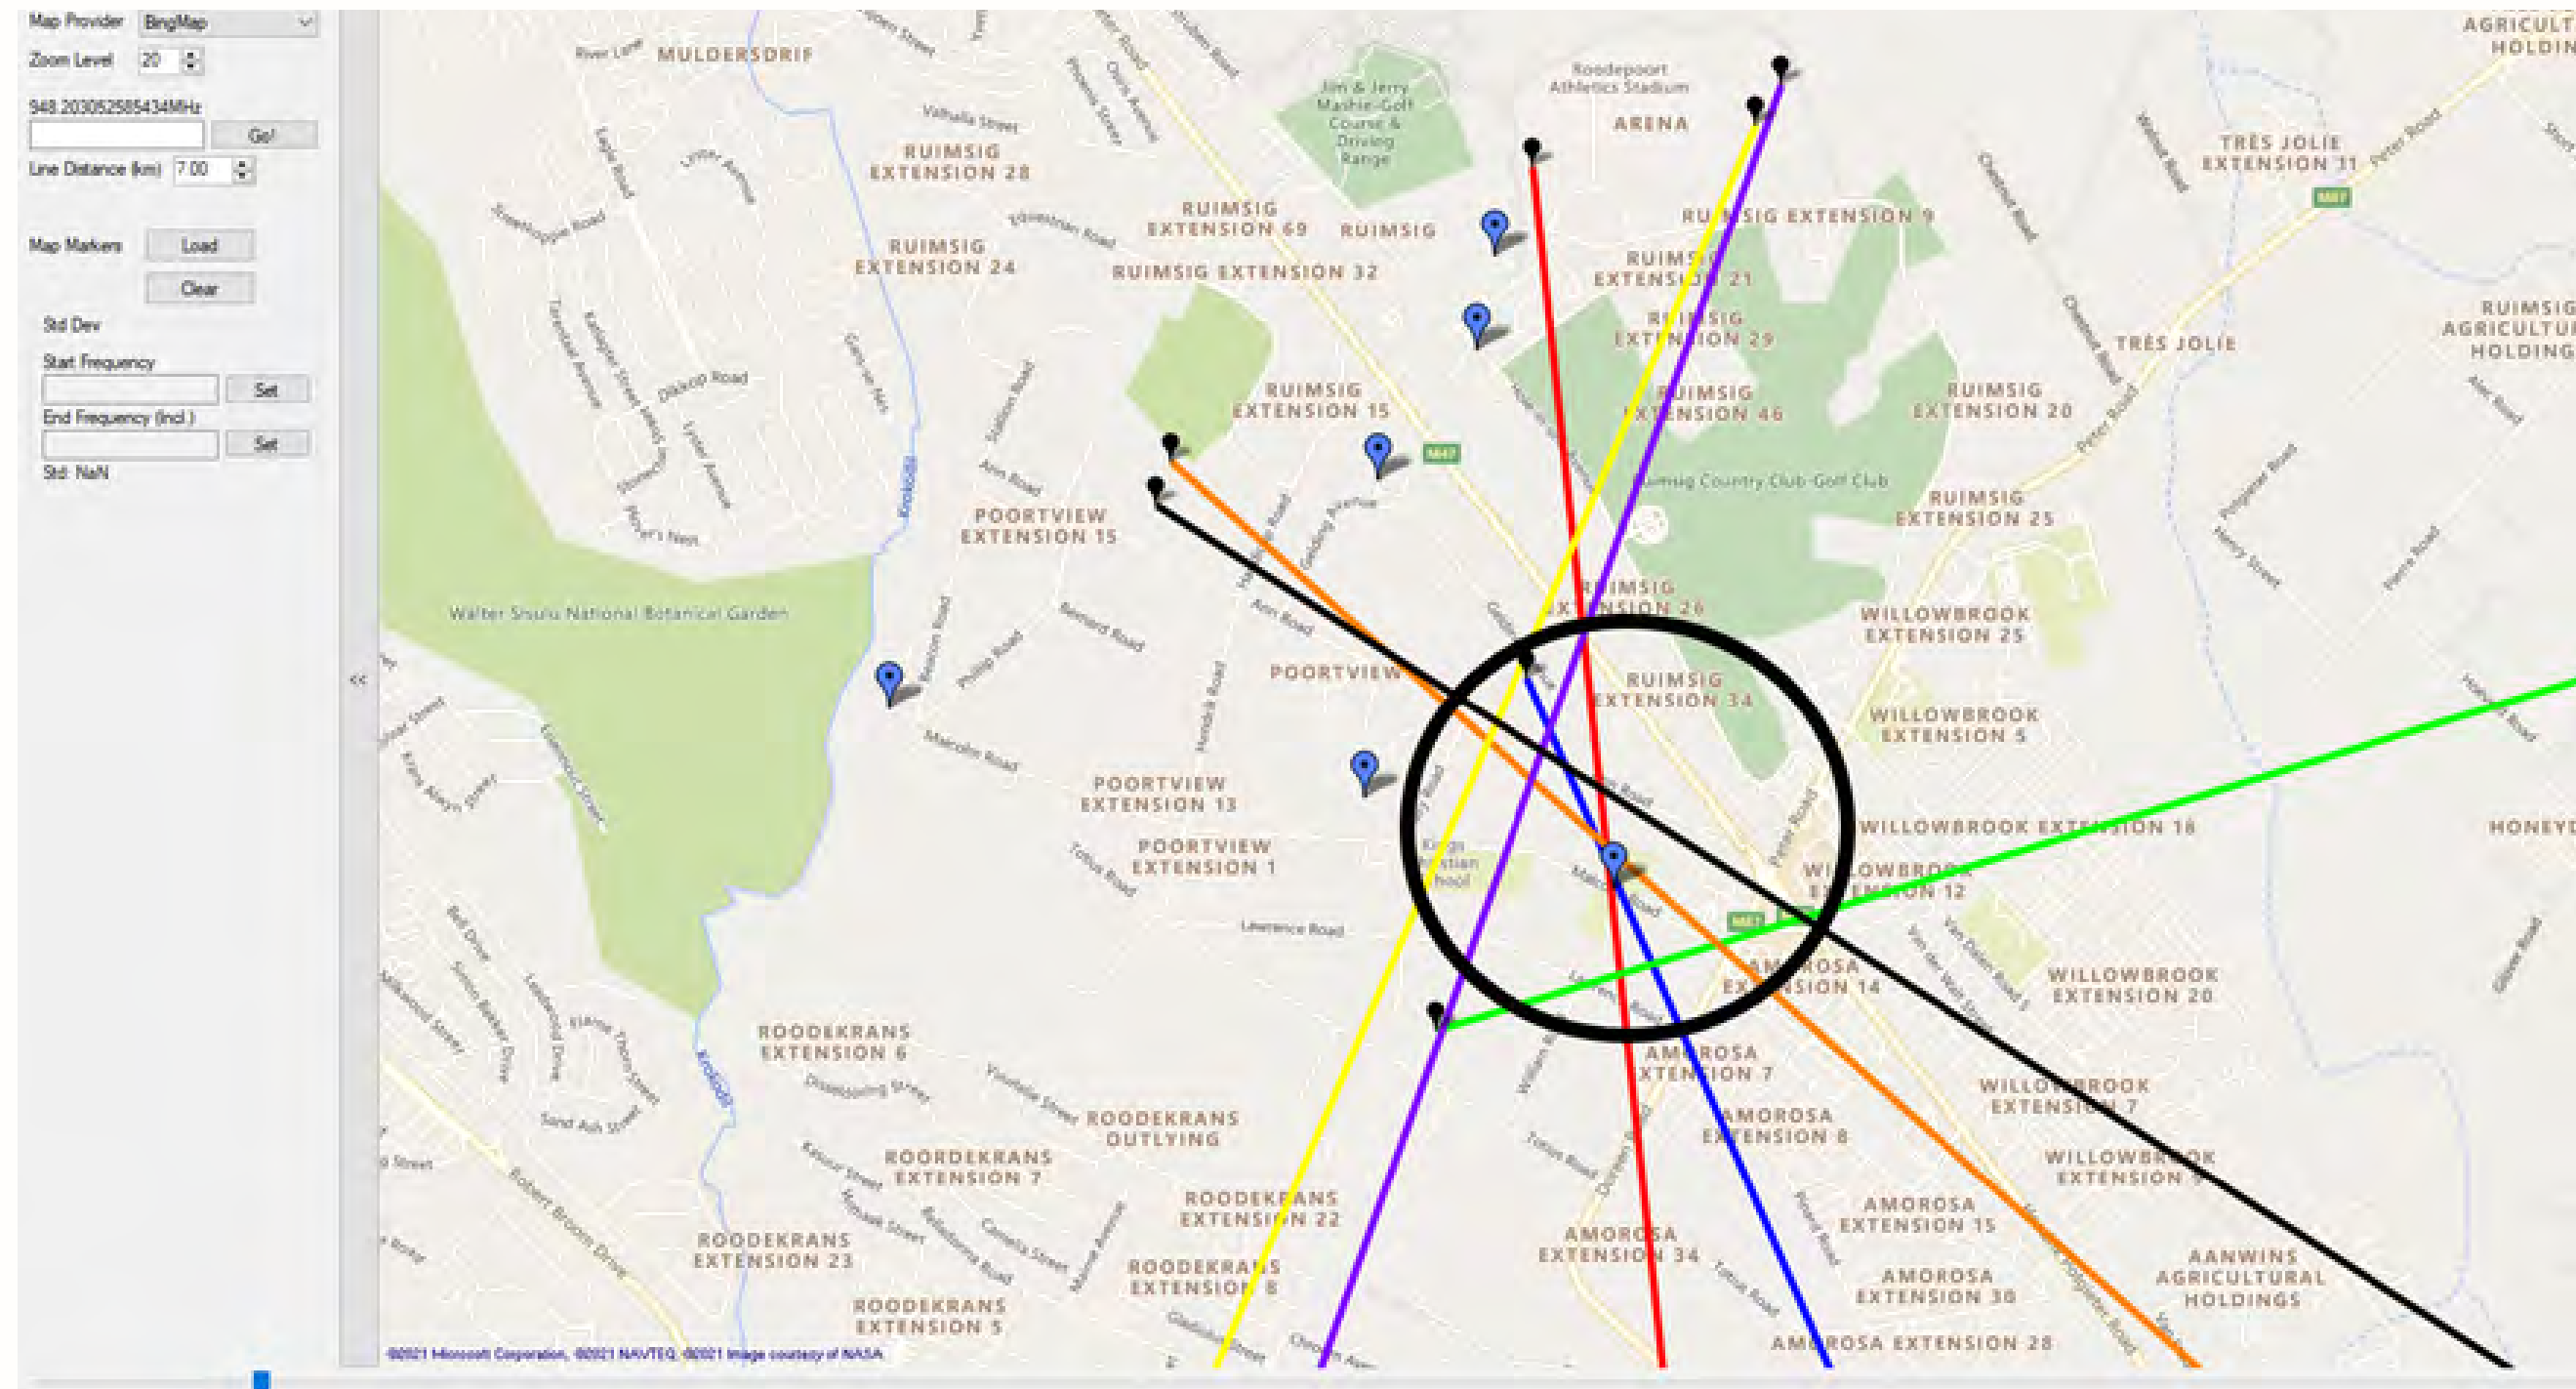

Live spectrum analysis

- See wideband information per selected RPA azimuth in DF measurement
- View drone movement and relative spectrum

Vector based RF source identification

- Plot vector for every measurement point in color of choice
- Automatic source detection per channel or selected frequency

04

Broadcast site audit

- Antenna pattern determination per channel
 - Elevation pattern
 - Azimuth pattern
 - 3D pattern
- Antenna tilt determination
- Antenna center of radiation height allocation
- Channel EIRP
- Antenna null-fill
- Broadcast Coverage predictions
- VHF and UHF broadcasting technologies

05

Mobile site audit

- Site channel occupancy detection
- Antenna pattern determination per channel
 - Elevation pattern
 - Azimuth pattern
- Antenna tilt determination
- Antenna center of radiation height allocation
- Channel EIRP
- Antenna null-fill
- GSM, UMTS, LTE, LTE-A, 5G technologies

06

Broadcast and mobile tower modelling

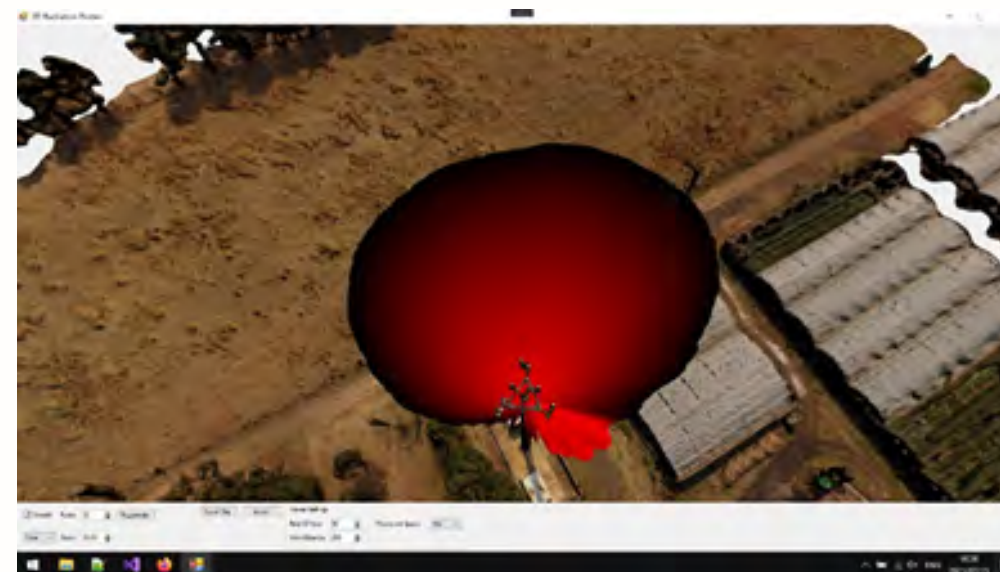

- Tower modelling enabled through photogrammetry
- New Lidar technology used on DJI M300 RTK, creates highly accurate models for analysis and measurements.

07

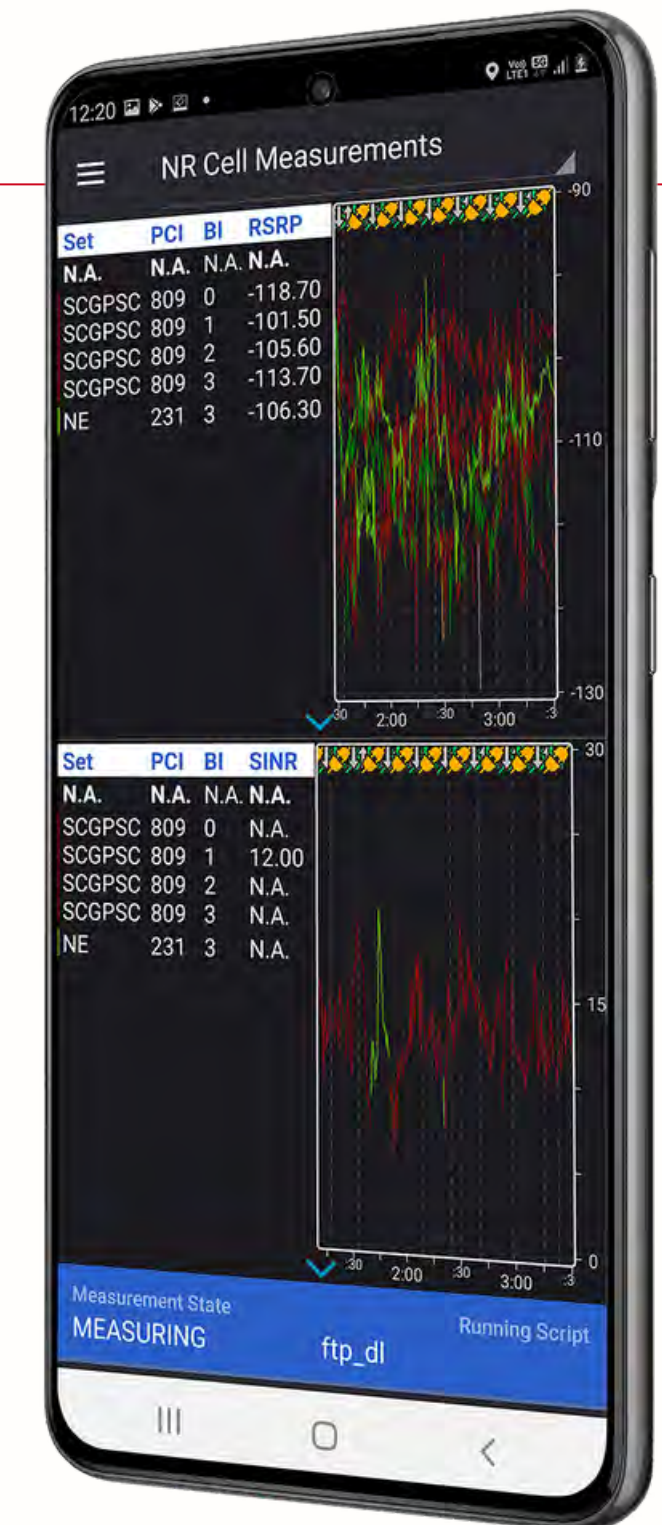

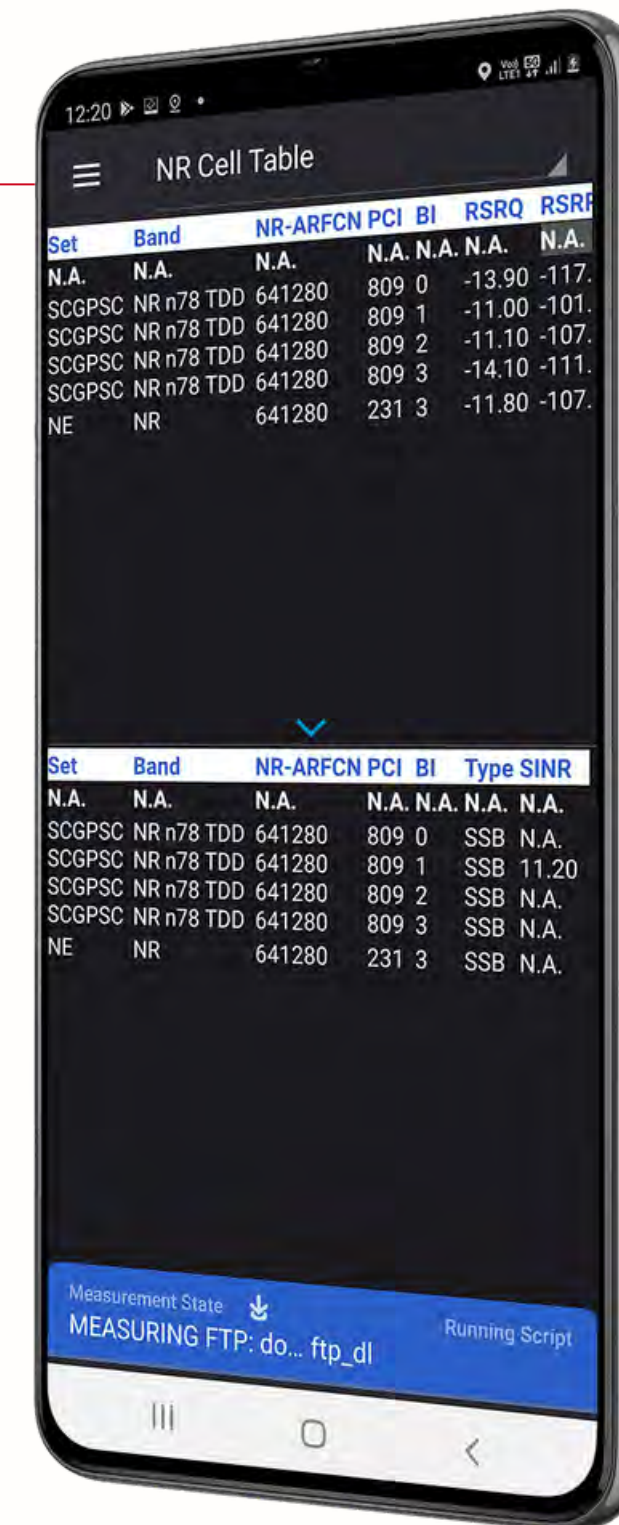

3D tower model and RF information integration

- Antenna specifications can be determined
 - Antenna mounting height
 - Antenna dimensions
 - Mast dimensions
 - Tower inspections

Channel specific inspections

- Using Keysight Nemo Handy mobile tool we are enable to integrate spectrum data as well as inter-modulated data to make more accurate conclusions about specific channels
- GSM, UMTS, LTE, LTE-A, 5G technologies

09

Satellite beam measurements + Microwave

- Measurements for microwave links and satellite dish antennas
 - Antenna 3 dB beamwidth
 - Main beam direction indication
 - Maximum transmitting power
